

MID UNIT – DUAL CAB

- A -- Mid Floor Unit:** This has a steel frame bolted to vehicle with a carpeted ply-board top. We can design hatches to retain access to the jack / under-floor storage compartments. 
- B -- Storage Area:** Full width across the vehicle to allow long items to be stored. Suitable to install tie-down to mount a Fridge, Jerry cans, etc.
- C -- Mid Shelf:** Steel frame with ply-board carpeted, which is bolted between the Cargo Barrier and a custom steel frame. The shelf doesn't have to be full width – allowing a second Fridge to be located behind the passenger/driver seats if needed. [Optional](#)
- D -- Custom Cargo Barrier:** Bolts to the Mid Floor frame, allowing the Shelf to be bolted into position. [Optional \(but is needed if installing a Shelf\)](#)

Mid Units are removable, allowing rear seats to be refitted when not required.
This Unit gives a huge increase in usable space within the vehicle and has the added advantage of being lighter than the seats being removed.

Giving you more weight carrying capacity and better weight distribution.
