

## MID UNIT

A B C D E F

- A -- **Pre-existing Cargo Barrier:** Premium quality, rated Autosafe barrier – specifically made to our Configurations for easy installation and removal, without having to drill your vehicle.  
Note: You must have one of our Storage Systems pre-existing in the rear of your vehicle for us to be able to Custom Fit a Mid and Top Shelf.
- B -- **Mid Floor Unit:** This has a steel frame bolted to vehicle with a carpeted ply-board top.
- C -- **Storage Area:** Full width across the vehicle to allow long items to be stored. Suits a Water Bladder or a solid Water Tank kit.
- D -- **Mid Shelf:** Steel frame with ply-board carpeted, which is bolted between the two Cargo Barriers. This shelf is optional, can be height adjusted, and does not have to be the full width – allowing a second Fridge to be located behind the passenger/driver seats if needed. [Optional](#)
- E -- **Top Shelf:** This is the same as the Mid Shelf. Depth may vary from Mid Shelf. [Optional](#)
- F -- **Second Cargo Barrier:** Bolts to the Mid Floor frame, allowing Mid and Top Shelves to be bolted into position. Must be our Cargo Barrier. [Optional \(but must be installed for Mid and Top Shelf support\)](#)

**Mid Units are removable, allowing rear seats to be refitted when not required.  
This Unit gives a huge increase in usable space within the vehicle and has the  
added advantage of being lighter than the seats being removed.  
Giving you more weight carrying capacity and better weight distribution.**
